

Propylene Glycol (Intercool P-300)

Overview

INTERCOOL P-300 is a propylene glycol based, industrially inhibited heat transfer fluid with an operating temperature range of -60°F to 300°F. It's engineered for applications that demand a low-toxicity fluid to satisfy environmental concerns and where propylene glycol use is demanded by law.

Industrial Inhibitors

Intercool P-300 contains industrial grade inhibitors to provide longer service life, superior performance, and resistance to biological growth in the system. It's long service-life is enhanced through annual complimentary analysis and with the option of re-inhibiting it's the perfect solution for many demanding applications including HVAC systems, cold storage equipment, and vapor recovery systems – just to name a few.

The inhibitors also provide a high level of reserve alkalinity so inhibitors remain effective for longer periods requiring less testing and re-inhibiting.

Most importantly, **Intercool P-300**'s industrial grade corrosion inhibitors are specially formulated for effective corrosion resistance to protect systems and their metal components, including ferrous and non-ferrous metals such as brass, copper, copper alloys, steel, cast iron, and aluminum.

Dilutions

Our pre-diluted glycols use high quality chemically treated pure de-ionized water, which is essential in preventing scale formation inside the system.

For those planning to dilute concentrated glycol themselves, we recommend using water that meets high standards for purity to maintain the effectivenes of the corrosion inhibitors, reduce inhibitor depletion, and prevent scale build-up. (Please see page 4 of this document for more information on water quality)

Intercool P-300 is available in full concentrate or in several concentrations pre-diluted with high quality de-ionized water, see below for concentrations needed for freeze point protection.

Concentration needed for Freeze Point Protection

30% Concentration provides a freeze point of +9°F

40% Concentration provides a freeze point of -6°F

50% Concentration provides a freeze point of -27°F

55% Concentration provides a freeze point of -37°F

Environmental

Intercool P-300 is biodegradable and will not concentrate in common water systems though massive contamination should be avoided as this may have harmful effects on aquatic life.

INTERCOOL HEAT TRANSFER FLUIDS TYPICAL QUESTIONS and ANSWERS

- 1) What kind of service life can I expect from my fluid? Fluid can last over twenty years if properly maintained and recommended operating procedures are followed.
- 2) What is the shelf life (resample time) of the fluid? If your fluid remains in storage for over two years, we recommend you have it analyzed prior to use.
- **3) How can glycol degradation be reduced?** Elimination of system oxygen, prevent high temperature excursions, and avoid contamination.
- 4) Do I need to use additional chemicals or hire a water treatment company to assist in fluid maintenance?

No, INTERCOOL is a complete heat transfer fluid. Adding incompatible inhibitors may result in fluid failure. By simply submitting samples routinely, we will assist you in maintaining you fluid.

5) What is the best way to monitor and maintain the fluid? The INTERCOOL fluid maintenance program will make recommendations on your reports for any necessary adjustments. INTERCOOL sample analysis will be performed on a semi annual basis.

6) Is there a simple and inexpensive way to check my glycol concentration? Yes, a Duo-Check refractometer, Model 7084, is available from Misco Products (1-800-358-1100) for testing the freeze point of ethylene or propylene glycol solutions.

7) Why not use utomotive antifreeze?

The inhibitors in automotive antifreeze are not designed for extended service and cannot be replenished. Additionally, silicated fluids may cause gels in your fluid. Also, the inhibitors are not compatible with INTERCOOL

8) Are INTERCOOLS compatible with all metals?

Although they are suitable for most metals of construction, they are not recommended for use with galvanized metals.

9) What concentrations should I use?

Always use the lowest concentration of HTF necessary to meet your temperature requirements. However, remember that in order to provide adequate corrosion protection and not support bacterial growth, you must use a minimum concentration of 25%. A maximum concentration of 65% should not be exceeded to prevent reduced heat transfer and freezing protection. Remember we offer INTERCOOL in premixed solutions for your conveniance.

10) Does water quality matter if I decide to dilute the fluid at the site?

Yes, water quality is critical to the life of your fluid. Your fluid will assume the corrosivity of the dilution water, so avoid highly chlorinated water or water with a high sulfate content. Hard water can cause inhibitor precipitation and will leave the system unprotected against corrosion. Additionally, the precipitate and hard water ions will cause scale formation and reduce your heat transfer efficiency.

11) What are the recommended guidelines for water quality?

De-ionized or distilled water is recommended. Municipal water may be used if it meets the following criteria. Water specification as per ASTM D-1193.

<100 PPM, total hardness as CaCo3

<100 PPM chloride and sulfate

< 40 PPM calcium + magnesium

12) What if I am not certain of the quality of my water?

The INTERCOOL lab will be happy to test your source of dilution water prior to the fill.

13) If I have used a competitive HTF prior to purchasing INTERCOOL, do I need to dispose of that fluid?

Not necessarily, INTERCOOL HTF is compatible with most other industrial heat transfer fluids. Automotive antifreezes are not compatible and must be removed; inhibited waters also tend not to be compatible.

14) Can I mix ethylene glycol and propylene glycol?

Yes, but it is not recommended as it becomes difficult to determine an accurate freezing point.

15) Do I have to clean my system before I add INTERCOOL?

Older systems should be inspected for rust, scale, oil, hydrocarbons, or other contaminates. Cleaning with INTERCLEAN MC-1 and / or DG-3 may be recommended.

For new systems rinsing with the proper quality water is generally adequate. If the new system contains minor grease, oil, pipe dope, or flash rust a single application with INTERCLEAN DG-3 may be recommended.

16) How do propylene glycol based fluids compare to ethylene glycol based fluids?

Ethylene glycol exhibits lower viscosity at lower temperatures, higher boiling point and lower vapor pressure. It is a more effective freeze point depressant and heat transfer medium. Ethylene glycol is more readily biodegraded and is also relatively non-toxic to aquatic life. Although ethylene glycol is considered more toxic to humans than propylene glycol, industrial grade propylene glycol coolants may not exhibit this same lower toxicity due to the use of non-food grade inhibitors and other ingredients.

Dilution Water Quality

To ensure superior corrosion protection, the dilution water must be of high quality. Poorquality water contains ions that make the fluid "hard" and corrosive. Calcium and magnesium hardness ions build up as scale on the walls of the system and reduce heat transfer. These ions may also react with the corrosion inhibitors in INTERCOOL HTF, causing them to precipitate out of solution and rendering the inhibitors ineffective in protecting against corrosion. In addition, high concentrations of corrosive ions, such as chloride and sulfate, will eat through any protective layer that the corrosion inhibitors form on the walls of the system. Ideally, de-ionized water should be used for dilution since de-ionizing removes both corrosive and hardness ions. Distilled water and zeolite softened water are also acceptable. Softened water, although free of hardness ions, may actually have increased concentrations of corrosive ions and, therefore, its quality must be monitored. It is recommended that dilution water contain less than 100 PPM calcium carbonate or less than 25 PPM calcium plus magnesium ions; and less than 25 PPM chloride or sulfate ions. For systems where high-quality dilution water is not available, Interstate Chemical offers various INTERCOOL Heat Transfer Fluid pre-diluted mixtures: from 25 to 65 volume percent INTERCOOL HTF that use only the highest quality de-ionized water.

The Effects of Pressure on Boiling Point Temperatures

A system under pressure can handle higher temperatures, and offers a higher static boiling point. Most liquids have a specific "boiling point", which is the temperature at which the liquid begins to change to a gas. If pressure is applied to the liquid, it must become hotter before it can boil. Pure water in a cooling system will boil (at sea level) at 212° F. At higher altitudes, atmospheric pressure is less than at sea level. Example: Water at 5,280 feet will boil at a mere 203° F. A cooling system that is under 15 pounds of pressure however, will now allow the water to reach nearly 250° F before it can boil. Even at this temperature the water is able to circulate through the engine, cooling parts that are at a much higher temperature without the water boiling. As long as the coolant remains in liquid form it can do it's job and transfer heat to the radiator or heat exchanger so it can be dissipated. Coolant that is boiling cannot transfer as much heat and overheating is likely to occur if the coolant turns to a gaseous state. Steam adjacent to a hot surface, such as a combustion wall, can actually act as an insulator - thus preventing any heat transfer to the coolant.

For every pound of pressure exerted on the coolant in the system, the static boiling point of the coolant is raised by approximately 3° F

| Coolant | 0 psi | 4 psi | 8 psi | 12 psi | 16 psi | 20 psi | 24 psi |

Energy Tips – Steam

Steam Tip Sheet #7 • January 2006

Industrial Technologies Program

Suggested Actions

Any scale in a boiler is undesirable. The best way to deal with scale is not to let it form in the first place. Prevent scale formation by:

- Pretreating of boiler makeup water (using water softeners, demineralizers, and reverse osmosis to remove scaleforming minerals)
- Injecting chemicals into the boiler feedwater
- Adopting proper boiler blowdown practices

Clean Boiler Waterside Heat Transfer Surfaces

Even on small boilers, the prevention of scale formation can produce substantial energy savings. Scale deposits occur when calcium, magnesium, and silica, commonly found in most water supplies, react to form a continuous layer of material on the waterside of the boiler heat exchange tubes.

Scale creates a problem because it typically possesses a thermal conductivity an order of magnitude less than the corresponding value for bare steel. Even thin layers of scale serve as an effective insulator and retard heat transfer. The result is overheating of boiler tube metal, tube failures, and loss of energy efficiency. Fuel waste due to boiler scale may be 2% for water-tube boilers and up to 5% in fire-tube boilers. Energy losses as a function of scale thickness and composition are given in the table below.

Energy Loss Due to Scale Deposits*

| | | Fuel Loss, % of Total Use | |
|-------------------------|----------|---------------------------|------------------|
| Scale Thickness, inches | | Scale Type | |
| | "Normal" | High Iron | Iron Plus Silica |
| 1/64 | 1.0 | 1.6 | 3.5 |
| 1/32 | 2.0 | 3.1 | 7.0 |
| 3/64 | 3.0 | 4.7 | - |
| 1/16 | 3.9 | 6.2 | - |

Note: "Normal" scale is usually encountered in low-pressure applications. The high iron and iron plus silica scale composition results from high-pressure service conditions.

*Extracted from *National Institute of Standards and Technology, Handbook 115, Supplement 1.* On well-designed natural gas-fired systems, an excess air level of 10% is attainable. An often stated rule of thumb is that boiler efficiency can be increased by 1% for each 15% reduction in excess air or 40°F reduction in the stack gas temperature.

Example

A boiler annually uses 450,000 million Btu (MMBtu) of fuel while operating for 8,000 hours at its rated capacity of 45,000 pounds per hour (lb/hr) of 150-poundsper-square-inch-gauge (psig) steam. If scale 1/32nd of an inch thick is allowed to form on the boiler tubes, and the scale is of "normal" composition, the table indicates a fuel loss of 2%. The increase in operating costs, assuming energy is priced at \$8.00 per million Btu (\$8.00/MMBtu), is:

Annual Operating Cost Increase = 450,000 MMBtu/yr x \$8.00/MMBtu x 0.02 = \$72,000

Monitor Flue Gas Temperature

An indirect indicator of scale or deposit formation is flue gas temperature. If the flue gas temperature rises (with boiler load and excess air held constant), the effect is possibly due to the presence of scale.

Resources

U.S. Department of Energy— DOE's software, the Steam System Assessment Tool and Steam System Scoping Tool, can help you evaluate and identify steam system improvements. In addition, refer to Improving Steam System Performance: A Sourcebook for Industry for more information on steam system efficiency opportunities.

Visit the BestPractices Web site at www.eere.energy.gov/industry/ bestpractices to access these and many other industrial efficiency resources and information on training.

Perform Visual Inspections

Visually inspect boiler tubes when the unit is shut down for maintenance. Scale removal can be achieved by mechanical means or acid cleaning. If scale is present, consult with your local water treatment specialist and consider modifying your feedwater treatment or chemical additives schedule.

Adapted from an Energy TIPS fact sheet that was originally published by the Industrial Energy Extension Service of Georgia Tech.

BestPractices is part of the Industrial Technologies Program Industries of the Future strategy, which helps the country's most energy-intensive industries improve their competitiveness. BestPractices brings together emerging technologies and best energy-management practices to help companies begin improving energy efficiency, environmental performance, and productivity right now.

BestPractices emphasizes plant systems, where significant efficiency improvements and savings can be achieved. Industry gains easy access to near-term and long-term solutions for improving the performance of motor, steam, compressed air, and process heating systems. In addition, the Industrial Assessment Centers provide comprehensive industrial energy evaluations to small- and medium-size manufacturers.

| CORROSION INHIBITORS AND pH BUFFERS | | (CAS No) Trade Secret | 1 - 10 | Not classified | | | | |
| LIQUID DYE | | (CAS No) Mixture | < 1 | Not classified | | | | |
| SECTION 4: Eirot aid macauraa | | | | | | | | |
| SECTION 4: First and measures | | | | | | | | |
| First aid moscures seneral | , N | r aive on thing by month to an uncertain | | | | | | |
| Irst-aid measures general : Never give anything by mouth to an unconscious person. If you feel unwell, seek medical advice (show the label where possible). | | | | | | | | |
| First-aid measures after inhalation | rst-aid measures after inhalation : Allow victim to breathe fresh air. Allow the victim to rest. | | | | | | | |
| First-aid measures after skin contact | : Rem by w | ove affected clothing and wash all expose arm water rinse. | ed skin area w | th mild soap and water, followed | | | | |
| First-aid measures after eye contact | Rinse immediately with plenty of water. Obtain medical attention if pain, blinking or redness persist. | | | | | | | |
| First-aid measures after ingestion | -irst-aid measures after ingestion : Rinse mouth. Do NOT induce vomiting. Obtain emergency medical attention. | | | | | | | |
| 01/08/2015 | EN (Eng | lish US) | | Page 1 | | | | |

| 4.2. Most important sym Symptoms/injuries | toms and effects, both acute and delayed : Not expected to present a significant hazard under anticipated conditions of normal use. | | | |
|---|--|----|--|--|
| 4.3. Indication of any immediate medical attention and special treatment needed | | | | |
| No additional information availa | le | | | |
| SECTION 5: Firefighting | measures | | | |
| 5.1. Extinguishing media | | | | |
| Suitable extinguishing media | : Foam. Dry powder. Carbon dioxide. Water spray. Sand. | | | |
| Unsuitable extinguishing media | : Do not use a heavy water stream. | | | |
| 5.2. Special hazards aris | ng from the substance or mixture | | | |
| No additional information availated | le | | | |
| 5.3. Advice for firefighter | | | | |
| Firefighting instructions | Use water spray or fog for cooling exposed containers. Exercise caution when fighting any chemical fire. Prevent fire-fighting water from entering environment | | | |
| Protection during firefighting | : Do not enter fire area without proper protective equipment, including respiratory protection. | | | |
| SECTION 6: Accidental | elease measures | | | |
| 6.1. Personal precaution | , protective equipment and emergency procedures | | | |
| 611 For non-omergeney | ersonnel | | | |
| Emergency procedures | | | | |
| Energency procedures | . Evacuate unnecessary personner. | | | |
| 6.1.2. For emergency resp | nders | | | |
| Protective equipment | : Equip cleanup crew with proper protection. | | | |
| Emergency procedures | : Ventilate area. | | | |
| 6.2. Environmental preca | utions | | | |
| Prevent entry to sewers and put | ic waters. Notify authorities if liquid enters sewers or public waters. | | | |
| 6.3 Mothods and materi | for containment and cleaning up | | | |
| Methods for cleaning up | . Soak up spills with inert solids, such as clay or diatomaceous earth as soon as possible | | | |
| Methods for cleaning up | Collect spillage. Store away from other materials. | | | |
| 6.4. Reference to other s | ctions | | | |
| See Heading 8. Exposure control | s and personal protection. | | | |
| SECTION 7: Handling a | d storage | | | |
| 7.1. Precautions for safe | nandling | | | |
| Precautions for safe handling | Wash hands and other exposed areas with mild soap and water before eating, drinking or smoking and when leaving work. Provide good ventilation in process area to prevent formatio of vapor. | 'n | | |
| 7.2. Conditions for safe | orage, including any incompatibilities | | | |
| Storage conditions | Keep only in the original container in a cool, well ventilated place away from : Sources of ignition. Keep container closed when not in use. | | | |
| Incompatible products | : Strong bases. Strong acids. | | | |
| Incompatible materials | : Sources of ignition. Direct sunlight. | | | |
| 7.3. Specific end use(s) | | | | |
| No additional information availa | | | | |
| SECTION 8: Exposure c | ontrols/personal protection | | | |
| 8.1. Control parameters | | _ | | |

| 4.2. Most important sym | ptoms and effects, both acute and delayed |
|--|---|
| Symptoms/injuries | : Not expected to present a significant hazard under anticipated conditions of normal use. |
| 4.3. Indication of any im No additional information availa | mediate medical attention and special treatment needed ble |
| SECTION 5: Firefighting | measures |
| 5.1. Extinguishing medi | |
| Suitable extinguishing media | : Foam. Dry powder. Carbon dioxide. Water spray. Sand. |
| Unsuitable extinguishing media | : Do not use a heavy water stream. |
| 5.2. Special hazards aris | ing from the substance or mixture |
| No additional information availa | ble |
| 5.3. Advice for firefighte | rs |
| Firefighting instructions | Use water spray or fog for cooling exposed containers. Exercise caution when fighting any chemical fire. Prevent fire-fighting water from entering environment. |
| Protection during firefighting | : Do not enter fire area without proper protective equipment, including respiratory protection. |
| SECTION 6: Accidental | release measures |
| 6.1. Personal precaution | s, protective equipment and emergency procedures |
| 6.1.1. For non-emergency | personnel |
| Emergency procedures | : Evacuate unnecessary personnel. |
| 612 For emergency res | onders |
| Protective equipment | · Equip cleanup crew with proper protection |
| Emergency procedures | · Ventilate area |
| 6.2 Environmental proc | |
| Prevent entry to sewers and pu | blic waters. Notify authorities if liquid enters sewers or public waters |
| Prevent entry to sewers and pu | |
| b.3. Methods and mater | al for containment and cleaning up |
| methous for cleaning up | Collect spillage. Store away from other materials. |
| 6.4. Reference to other s | sections |
| See Heading 8. Exposure contr | ols and personal protection. |
| SECTION 7: Handling a | nd storage |
| 7.1. Precautions for safe | handling |
| Precautions for safe handling | Wash hands and other exposed areas with mild soap and water before eating, drinking or smoking and when leaving work. Provide good ventilation in process area to prevent formation of vapor. |
| 7.2. Conditions for safe | storage, including any incompatibilities |
| Storage conditions | Keep only in the original container in a cool, well ventilated place away from : Sources of ignition. Keep container closed when not in use. |
| Incompatible products | : Strong bases. Strong acids. |
| Incompatible materials | : Sources of ignition. Direct sunlight. |
| 7.3. Specific end use(s) No additional information availa | ble |
| SECTION 8: Exposure (| controls/personal protection |

Avoid release to the environment. | | | |
| SECTION 13: Disposal considerations 13.1. Waste treatment methods Waste disposal recommendations Ecology - waste materials SECTION 14: Transport information In accordance with DOT Not regulated for transport Additional information Other information | Dispose in a safe manner in accordance with local/national regulations. Avoid release to the environment. No supplementary information available. | | | |
| SECTION 13: Disposal considerations 13.1. Waste treatment methods Waste disposal recommendations Ecology - waste materials SECTION 14: Transport information In accordance with DOT Not regulated for transport Additional information Other information ADR | Dispose in a safe manner in accordance with local/national regulations. Avoid release to the environment. No supplementary information available. | | | |
| SECTION 13: Disposal considerations 13.1. Waste treatment methods Waste disposal recommendations Ecology - waste materials SECTION 14: Transport information In accordance with DOT Not regulated for transport Additional information Other information ADR No additional information available | Dispose in a safe manner in accordance with local/national regulations. Avoid release to the environment. No supplementary information available. | | | |
| SECTION 13: Disposal considerations 13.1. Waste treatment methods Waste disposal recommendations Ecology - waste materials SECTION 14: Transport information In accordance with DOT Not regulated for transport Additional information Other information ADR No additional information available Transport by sea | Dispose in a safe manner in accordance with local/national regulations. Avoid release to the environment. | | | |
| SECTION 13: Disposal considerations 13.1. Waste treatment methods Waste disposal recommendations Ecology - waste materials SECTION 14: Transport information In accordance with DOT Not regulated for transport Additional information Other information Other information ADR No additional information available Transport by sea No additional information available | Dispose in a safe manner in accordance with local/national regulations. Avoid release to the environment. No supplementary information available. | | | |
| SECTION 13: Disposal considerations 13.1. Waste treatment methods Waste disposal recommendations Ecology - waste materials SECTION 14: Transport information In accordance with DOT Not regulated for transport Additional information Other information Other information ADR No additional information available Transport by sea No additional information available Air transport | Dispose in a safe manner in accordance with local/national regulations. Avoid release to the environment. No supplementary information available. | | | |
| SECTION 13: Disposal considerations 13.1. Waste treatment methods Waste disposal recommendations Ecology - waste materials SECTION 14: Transport information In accordance with DOT Not regulated for transport Additional information Other information Additional information available Transport by sea No additional information available Air transport No additional information available | Dispose in a safe manner in accordance with local/national regulations. Avoid release to the environment. No supplementary information available. | | | |
| SECTION 13: Disposal considerations 13.1. Waste treatment methods Waste disposal recommendations Secondations Ecology - waste materials Secondations SECTION 14: Transport information In accordance with DOT In accordance with DOT Not regulated for transport Additional information Other information Other information Secondational information available Transport by sea No additional information available Air transport No additional information available SECTION 15: Regulatory information Secondation | Dispose in a safe manner in accordance with local/national regulations. Avoid release to the environment. No supplementary information available. | | | |
| SECTION 13: Disposal considerations 13.1. Waste treatment methods Waste disposal recommendations Ecology - waste materials SECTION 14: Transport information In accordance with DOT Not regulated for transport Additional information Other information Other information ADR No additional information available Transport by sea No additional information available Air transport No additional information available SECTION 15: Regulatory information 15.1. US Federal regulations | Dispose in a safe manner in accordance with local/national regulations. Avoid release to the environment. | | | |
| SECTION 13: Disposal considerations 13.1. Waste treatment methods Waste disposal recommendations Ecology - waste materials SECTION 14: Transport information In accordance with DOT Not regulated for transport Additional information Other information Additional information available Transport by sea No additional information available Air transport No additional information available SECTION 15: Regulatory information 15.1. US Federal regulations 1,2-propanediol (57-55-6) | Dispose in a safe manner in accordance with local/national regulations. Avoid release to the environment. No supplementary information available. | | | |
| SECTION 13: Disposal considerations 13.1. Waste treatment methods Waste disposal recommendations Ecology - waste materials SECTION 14: Transport information In accordance with DOT Not regulated for transport Additional information Other information ADR No additional information available Transport by sea No additional information available Air transport No additional information available SECTION 15: Regulatory information 15.1. US Federal regulations 1,2-propanediol (57-55-6) Listed on the United States TSCA (Toxic Substated) | Dispose in a safe manner in accordance with local/national regulations. Avoid release to the environment. No supplementary information available. | | | |
| SECTION 13: Disposal considerations 13.1. Waste treatment methods Waste disposal recommendations Ecology - waste materials SECTION 14: Transport information In accordance with DOT Not regulated for transport Additional information Other information Other information Other information available Transport by sea No additional information available Air transport No additional information available SECTION 15: Regulatory information 15.1. US Federal regulations 1,2-propanediol (57-55-6) Listed on the United States TSCA (Toxic Substar 15.2. International regulations | Dispose in a safe manner in accordance with local/national regulations. Avoid release to the environment. | | | |

Safety Data Sheet

according to Federal Register / Vol. 77, No. 58 / Monday, March 26, 2012 / Rules and Regulations

EU-Regulations

Classification according to Regulation (EC) No. 1272/2008 [CLP]

Classification according to Directive 67/548/EEC [DSD] or 1999/45/EC [DPD]

Not classified

15.2.2. National regulations No additional information available

15.3. US State regulations

| 1,2-propanediol (57-55-6) | | | | |

| U.S New Jersey - Right to Know Hazardous Substance List | | | | |
| SECTION 16: Other information | | | | |
| Abbreviations and acronyms | : | European Agreement concerning the International Carriage of Dangerous Goods by Inland Waterways. European Agreement concerning the International Carriage of Dangerous Goods by Road. Acute Toxicity Estimate. Bioconcentration factor. Classification Labelling Packaging Regulation; Regulation (EC) No 1272/2008. Derived Minimal Effect level. Derived-No Effect Level. Dangerous Preparations Directive 1999/45/EC. Dangerous Substances Directive 67/548/EEC. Median effective concentration. International Agency for Research on Cancer. International Air Transport Association. International Maritime Dangerous Goods. Median lethal concentration. Median lethal dose. Lowest Observed Adverse Effect Level. No- Observed Adverse Effect Concentration. No-Observed Effect Concentration. Organisation for Economic Co-operation and Development. No-Observed Adverse Effect Level. Persistent Bioaccumulative Toxic. Predicted No-Effect Concentration. Registration, Evaluation, Authorisation and Restriction of Chemicals Regulation (EC) No 1907/2006. Regulations concerning the International Carriage of Dangerous Goods by Rai. Safety Data Sheet. Sewage treatment plant. Median Tolerance Limit. Very Persistent and Very Bioaccumulative. | | |
| Other information | : | None. | | |
| NFPA health hazard | : | 1 - Exposure could cause irritation but only minor residual injury even if no treatment is given. | | |
| NFPA fire hazard | : | 0 - Materials that will not burn. | | |
| NFPA reactivity | : | 0 - Normally stable, even under fire exposure conditions, and are not reactive with water. | | |
| HMIS III Rating | | | | |
| Health | : | 1 Slight Hazard - Irritation or minor reversible injury possible | | |
| Flammability | : | 0 Minimal Hazard | | |
| Physical | : | 0 Minimal Hazard | | |
| Personal Protection | : | В | | |
